End-to-End Project Intelligence
for Architecture & Construction

From first drawing to final receipt — every move, on record.

What typically goes wrong

Even with good teams on both sides.

Information scattered

Drawings in email, MOMs in WhatsApp, approvals on phone calls. No single source of truth.

Design changes lose context

Revision R3 goes to site but R2 is what the contractor priced. No one catches it until steel is cut.

Client invoicing is reactive

Invoices raised from memory of milestones. TDS tracking manual. GST treatment inconsistent across projects.

Payment disputes surface late

Vendor claims come weeks after work is done. No GRN trail, no linked PO, no evidence chain.

Schedule slippage goes undetected

Task updates are verbal. No validation. The delay is visible only when the client asks at month-end.

None of these require negligence. They require a system that doesn't exist yet.

One platform. Every layer of a project.

From design kickoff to DLP closeout.

Dashboard — Action Centre

Every person sees only what they need to act on — filtered by role, project, and urgency.

- Red items demand action today — overdue reports, unanswered drawing queries
- Amber items need attention this week — pending approvals, open flags
- Blue items are in motion — CN signatures being collected
- Each item deep-links directly to the affected record
- Separate dashboard for each role: site, design, finance, PMC

DONE

Drawings — Two-level approval, no shortcuts

Every drawing revision goes through the same gate before reaching site.

- Reject path sends drawing back with comments — no revision silently dropped
- Superseded revisions locked — site cannot act on outdated drawings
- Every approval records who, when, and from which IP
- Drawing queries raised against specific revision — linked, not lost in chat
- Query response triggers WhatsApp notification to the raising team

Drawings — WESCH Phase 01		
STRUCTURAL		
WESCH-S-001 R3	RCC Column Grid A-F	ISSUED
WESCH-S-002 R1	Awaiting: L2 approve	PENDING
WESCH-S-003 R0	Query open — Grid B offset	QUERY
SERVICES		
WESCH-M-001 R2	Plumbing Schematic	ISSUED
WESCH-E-001 R1	LT Panel Layout	ISSUED
WESCH-E-002 R0	Pending L1 review	PENDING

Schedule — Tasks validated, not just ticked

Site manager reports progress. PMC head validates before it counts.

- Schedule uploaded as Excel — task ID, name, trade, start/end, weight %
- Site manager marks % complete with daily report — not unilateral
- PMC validates each task completion before it rolls into overall progress
- Re-upload locks the old version — full revision history with date
- Daily reports include photo evidence, labour count, issues flagged
- AI anomaly detection flags suspicious entries (e.g. 100% in one day)
- Weekly health report auto-generated and reviewed before going to client

Procurement — Every rupee linked to delivery

No payment without a GRN. No GRN without a PO. Disputes become facts.

- Vendor engaged with scope, contract value, and mobilisation date on record
- GRN raised against delivery — quantity, quality flag, photo evidence
- NCR raised directly from a GRN if quality non-conforming — vendor notified
- Payment request raised against GRN trail — not from memory
- Approval chain: PMC Head → Principal → finance
- ICICI bulk payment file generated, reviewed with expected total, then applied
- UTR confirmation from bank updates each payment record automatically

Payment Requests	
₹12.4L Pending	₹44.8L Paid MTD
AWAITING APPROVAL	
Shri Tiles — Supply + Labour GRN-041 · ₹2,18,450	PMC REVIEW
Ravi Electrical Contractors GRN-039 · ₹88,000	PMC REVIEW
PRINCIPAL APPROVAL	
Aryan Steel — Reinforcement GRN-038 · ₹7,14,200	PENDING
RECENTLY PAID	
Bharat Formwork Ltd UTR 123456789 · ₹3,42,000	PAID

MOMs — Agreed. Issued. Acknowledged.

A MOM that was never seen by the client is not a MOM.

- PMC approves internally first — client never sees a draft by accident
- Preview step shows exact WhatsApp message before it is sent
- Client acknowledges via WhatsApp reply — timestamp recorded
- Action items extracted from MOM — tracked to closure separately
- Up to 4 revisions before MOM is locked; each revision is versioned

MOMs — WESCH Phase 01	
RECENT	
MOM-042 Site Coordination Issued 14 Apr · Client ✓	ACKED
MOM-041 Design Review Issued 07 Apr · Client ✓	ACKED
MOM-043 Contractor Mtg PMC approved · Not yet sent	APPROVED
ACTION ITEMS (open)	
Contractor to resubmit shop dwgs Due: 20 Apr · Owner: Site team	OPEN
Engineer to confirm footing load Due: 18 Apr · Owner: Services	OPEN
Rebar delivery rescheduled Done 16 Apr	DONE

Finance — From milestone to receipt, fully tracked

Billing tied to the fee schedule. Every rupee in and out has a paper trail.

- Proforma invoices raised against pre-agreed fee-schedule milestones
- Client master must be complete (GSTIN, Tally ledger) before first PI — enforced
- GST treatment (regular / SEZ / unregistered) set per client, not per project
- Client receipt records UTR, date, amount, and TDS deducted
- TDS auto-computed and logged — reconcilable against Form 26AS
- Petty cash float tracked with running balance — expense categories enforced
- Tally-XML export available for each client receipt

Invoices — WESCH Phase 01	
₹54.2L Raised	₹38.4L Received
PROFORMA INVOICES	
PI/WESCH/2026/001 Stage 1 — Concept · ₹11,24,550	PAID
PI/WESCH/2026/002 Stage 2 — Schematics · ₹9,38,000	PAID
PI/WESCH/2026/003 Stage 3 — DD · ₹15,74,250	SENT
PI/WESCH/2026/004 Stage 4 — WD · Not yet raised	PENDING

Built-in guardrails.

Not every system needs a human to prevent every mistake. Some should be structurally impossible.

Preview before every external send

MOMs, NCR notices, vendor payments — a confirmation step with expected total shows what will happen before it does.

Audit log — every action, every user

Who approved, when, from which IP. Anomaly acknowledgements, MOM unlocks, client receipt recordings — all permanently logged.

Role-permission governance

318 backend routes across 15 roles. Permission matrix defines who can do what — not buried in code. Pre-delivery scanner validates gates on every build.

Client master guard on PI

No PI can be raised until GSTIN and Tally ledger are set. Wrong GSTIN on a tax invoice is not a recoverable error.

Optimistic locking on critical records

Two people cannot simultaneously approve the same payment or MOM. The second save detects the conflict and rejects it.

Two-step all irreversible actions

ICICI payment file, vendor NCR notice, MOM to client — all split into preview → confirm with typed code. No single-click disasters.

WhatsApp — where your team already is

No app to install. No separate login for the field team.

- Payment confirmations sent to vendors the moment UTR is applied
- Site manager gets task-rejection notice with reason — not a vague call
- Client receives MOM preview; their reply is captured as acknowledgement
- NCR notice to vendor links the GRN reference and required rectification
- Drawing issued to site — notification with revision number and category
- Finance admin gets a task when a new stub client needs master completion
- All notifications go through a delivery log — sent, delivered, read, failed

What this means for your project

You are not taking our word for how your project is going.

You are seeing it.

Real-time visibility

Weekly health reports, schedule progress, open issues — all structured, not written from memory.

Decisions are traceable

Every approved drawing, every confirmed change notice, every MOM — recorded with who authorised it and when.

Communication is on record

WhatsApp acknowledgements, query responses, action item tracking — your decisions don't live in someone's chat history.

Vendor accountability

Payment is linked to delivery. An NCR goes to the vendor before payment is released. Evidence is built, not assembled later.

Billing is predictable

You see upcoming milestones. You receive invoices against stages you already agreed to, not surprises.

Best team, not just best name

Our value is in tight management — not in promising the best output and then managing by exception.

By the numbers

These are engineering facts, not marketing claims.
